TECHNICAL SKILLS

Modernization: Performance Optimization, Security Remediation (OWASP Top 10), Legacy Refactoring, Database Query Optimization, Architecture Migration, Technical Debt Reduction

Languages: TypeScript, Python, Rust, SQL

Stack: React, Next.js, FastAPI, Node.js, PostgreSQL, Redis, pgvector, Docker, AWS, CI/CD, Jest, Playwright, Monitoring (Datadog, Sentry)

PROFESSIONAL EXPERIENCE

Independent AI & Software Consultant 2024 – Present

Application Modernization — Rescuing underperforming systems with measured before/after metrics on every engagement

Greenline Commerce (Online Retailer, \$5M Revenue) — 5 months

- Rescued critically compromised e-commerce platform: patched 14 critical security vulnerabilities (SQL injection, XSS, exposed API keys), improved Lighthouse from 32 to 98, achieving SOC 2 readiness
- Eliminated N+1 query cascade reducing database queries from 47 to 3 per product page, dropping page load from 8.2s to 1.1s and DB CPU utilization from 85% to 12% under production traffic
- Implemented 87% test coverage (unit, integration, e2e), CI/CD pipeline with automated security scanning, and monitoring stack reducing mean-time-to-detection from 6 hours to under 2 minutes

Silverstone Legal (Mid-Size Law Firm, 80 Attorneys) — 4 months

- Modernized legacy case management system from jQuery/PHP monolith to React/Next.js architecture, reducing page load times by 6x and eliminating 12 critical runtime errors affecting daily operations
- Built automated document processing pipeline handling 500+ legal documents daily, reducing manual data entry by 80% and enabling full-text search across 10 years of case history

Atlas Workforce (HR Tech SaaS, 15K Active Users) — 3 months

- Optimized PostgreSQL query performance across 23 critical endpoints, reducing average API response time from 2.3s to 180ms and eliminating timeout errors affecting 8% of daily user sessions
- Hardened authentication and API security across 40+ endpoints, passing third-party penetration test with zero critical findings (down from 9 critical and 23 moderate vulnerabilities)

AI Data Specialist — Scale AI 2023 (6 months)

- Evaluated LLM quality and identified failure modes through expert red-teaming, developing deep understanding of AI system reliability and production failure patterns
- Developed prompt engineering strategies improving model output quality for code generation and reasoning tasks across production systems serving millions of users

Full-Stack Software Engineer — Contract 2020 – 2023

- Delivered 8 production web applications with focus on performance optimization, security hardening, and production-quality engineering across fintech, healthcare, and e-commerce
- Migrated legacy monolith to microservices for financial services client, reducing deployment time from 3 days to 45 minutes and eliminating 90% of release-related incidents
- Implemented real-time WebSocket dashboards serving 1,000+ concurrent users with <100ms latency and zero-downtime deployment pipelines across all client applications
